1. **Betty Hay Award (TEMTIA)**
 2. **TEMTIA Poster Award and Travel Bursaries**
 3. **Additional Travel Bursaries AAA**
-

Betty Hay Award

The EMT field has developed from the pioneering work of **Dr. Elizabeth Hay** and her students during the late 1970s when she began to discuss the differences between epithelial cells and mesenchymal cells in the embryo. The first experimental investigation of EMT developed from the immersion of embryonic epithelial cells into an extracellular matrix (Greenburg and Hay, 1982).

TEMTIA recognizes her seminal contributions to the field through the **Betty Hay Lecture**, delivered at the EMT Conference and the **Betty Hay Award** for female postdoctoral fellows / early career researchers within 5 years of their PhD Award.

The successful Betty Hay Award recipient received an award of **AU\$500 and a registration waiver**.

TEMTIA Travel Bursaries

The TEMTIA travel bursaries are aimed at providing vital financial assistance to students and junior postdoctoral fellows (< 3 years post-doc) to be able to attend the TEMTIA conferences, benefit from the scientific talks and exchanges, and interact and network with senior scientists and fellow researchers from all over the world.

Successful TEMTIA travel bursary applicants were awarded AU\$400 (if 5 awards) for partial support of travel expenses.

American Association of Anatomists Travel Bursaries

The AAA provided support for travel awards for Junior Faculty, postdocs or Students. Applicants who are members of the **American Association of Anatomists**.

Successful AAA travel bursary applicants were awarded AU\$500 for partial support of travel expenses.
